

Hii..First of all I would like to thank you for this wonderful opportunity to introduce myself

This is U. Nandhakumar born and brought up in coimbatore.

where I come from a humble family of four members including myself!

To begin with my education career, I feel elated to tell you that

I completed my schooling at Brilliant Matric. Hr. sec school with 87%.

and graduated as a first class Mechanical Engineer from Coimbatore Institute of Engineering and Technology.

As for my career,I started working as a Design Engineer in a manufacturing company.

While working with CAD softwares, CNC machines and mechanical components,I was drawn attention by the computer programs that made this world easier day after day.

My optimistic skills took me further to learn programming

and made me choose data science as a working career.

Data Science as a career or as a personal hobby makes decisions smarter.We as a Data scientist, use our knowledge to provide better and optimistic solutions just by using the raw data.I strongly believe that, as a Data scientist we can uncover solutions hidden in the data to take on business challenges and goals.

To pursue my ambitions, I quit my job as a Design Engineer but not my skills as a Design Engineer.

Then I started learning data science for a better tomorrow.

And finally, the thing which makes me move forward in my life as well as career is my hobbies

which includes playing football, volleyball and listening to music

It helps me stay strong both physically and mentally.

With this I would like to conclude.

Thankyou
